

*Optional automatic open/close
built-in shutter covers entire coupling hole*

LC Snug-In Type Adapter Series

With Dust Protection Shutter Option

Sanwa LC Snug-In Adapters meet the needs of applications where the adapter must install tightly and be resistant to vibration. Designed with metal plates on all sides of the adapter that expand to tightly fit into the panel, these adapters provide a secure, vibration-resistant fit.

Available in slim-pack duplex and quad models, Sanwa's LC Snug-In Adapters can be ordered with optional dust protection shutters, which are designed to cover the entire coupling hole. These built-in shutters are automatically opened as the LC connector is inserted, and closed as it is extracted, providing a barrier against dust and protecting workers' eyes from laser exposure.

Slim-pack duplex type and quad are both available now.

- *Insertion loss (typical); 0.2dB or less*
- *UL94V-0 flammability grade*
- *RoHS and REACH compliant*
